

## **STARK -RAILWAY BROOM**

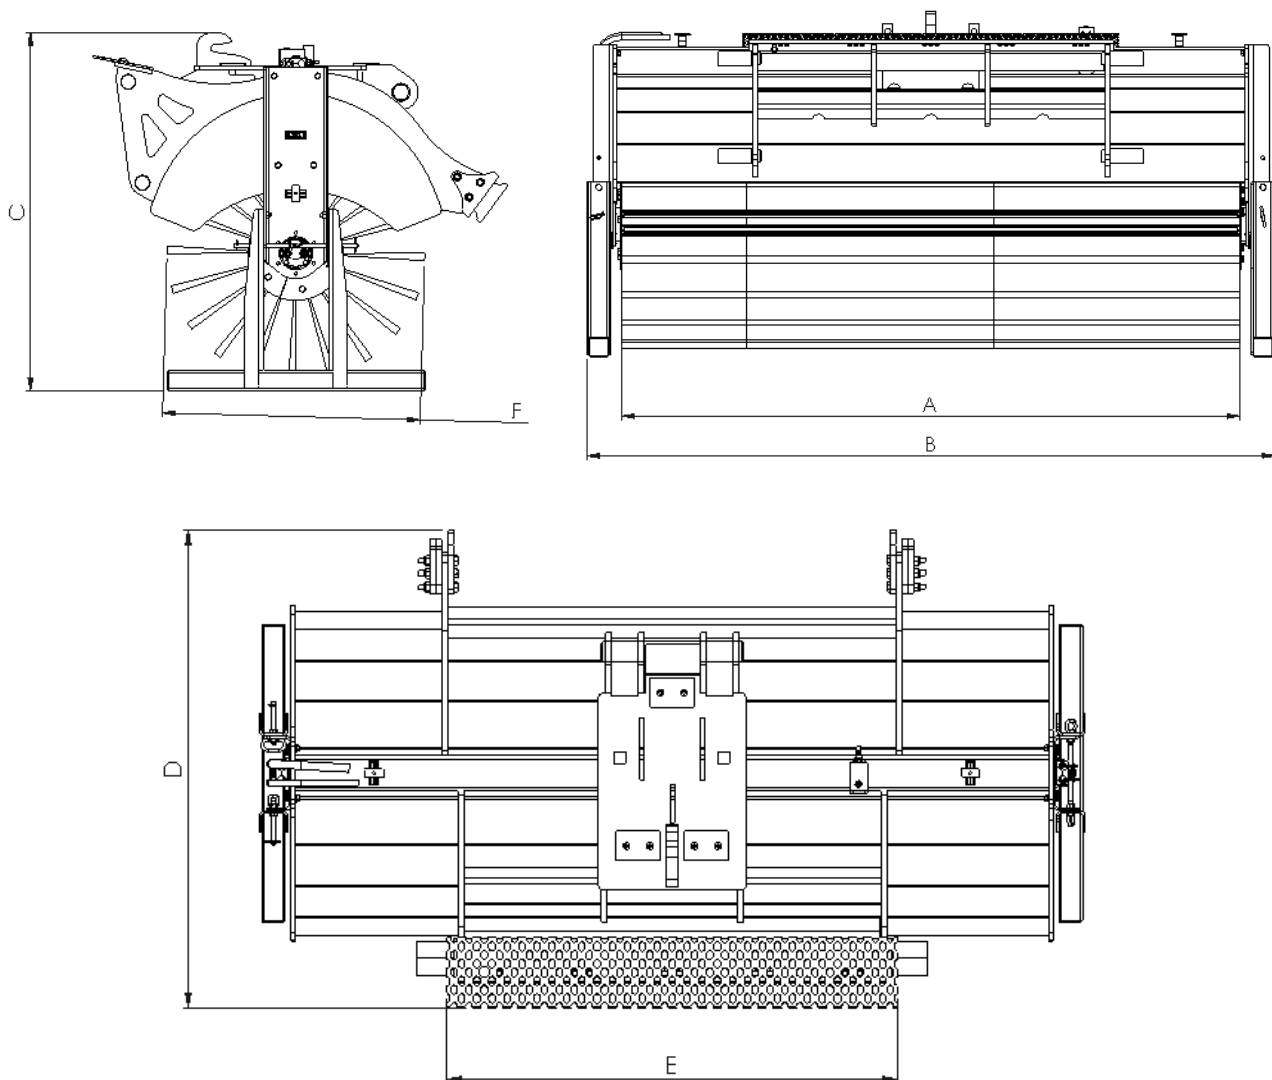

- Professional's choice
- Powerful, versatile and agile sweeper for year-round use in excavators

- The STARK RB 2500 -railway brush is designed for fast and efficient cleaning at switches, yards and level crossings. The strip brush lamellas are especially suitable for brushing snow.
- The railway brush is attached with a quick-release to the turning device of an excavator or backhoe loader with rail wheels.
- The rugged body and weight of 1250 kilos bring even more security.
- The brush's two powerful 315 cm<sup>3</sup> hydraulic motors ensure even rotation of the brush roller in situations where the brush is pressed harder than usual against the ground.
- The replacement of the list lamellas is quick and does not require special tools.
- Rasp with net blades and scratching nails for deicing as standard.
- Need for hydraulics: connection with two hoses, requires one double-acting hydraulic block. The minimum oil requirement for the brush is 90 liters per minute.
